(FYP Project Proposal)

1) Project Title :-

LARAVEL BASED JOB PORTAL WEB APPLICATION

2) Project Description :-

The Online Job Application and Tracking System is designed to support digital recruitment by providing an online platform where candidates can search for jobs and submit applications. Job seekers can create accounts, manage their profiles, and upload resumes through the system. Employers are able to publish job vacancies and review candidate applications through a structured dashboard. The system also allows applicants to monitor the progress of their submitted applications. Administrative users manage system operations and ensure that data is maintained accurately. The project aims to enhance transparency in the recruitment process by allowing users to track job applications in a centralized environment.

3) Technologies :-

- **Frontend** HTML, CSS, JavaScript, Bootstrap
- **Backend** PHP, Laravel
